A bedroom with a bed, a couch, and string lights. The room is dimly lit, with the primary light source being a string of warm white lights hanging from the ceiling. The bed has white pillows and a teal blanket. A couch with a plaid pillow is visible on the left. Posters are on the wall, and a nightstand with various items is on the right.

Using Hand Movements to Turn on my Electricity

But why?

Two words: Home Improvement.

- Problem: String lights are **tasking** to plug in and out every time I want to use them.
- Solution: A switch to control lights, preferably one I can use while seated at my desk.
 - First idea: Clapper type switch with sound activation
 - Second idea: Motion sensor switch

A bedroom scene with a bed in the foreground, a couch to the left, and a nightstand to the right. The room is decorated with string lights along the top of the wall. A poster titled "WALK THE MOON" is visible on the wall. The text "Second Idea: Using Hand Movements to Turn on my Electricity" is overlaid in the center.

Second Idea: Using Hand Movements to Turn on my Electricity

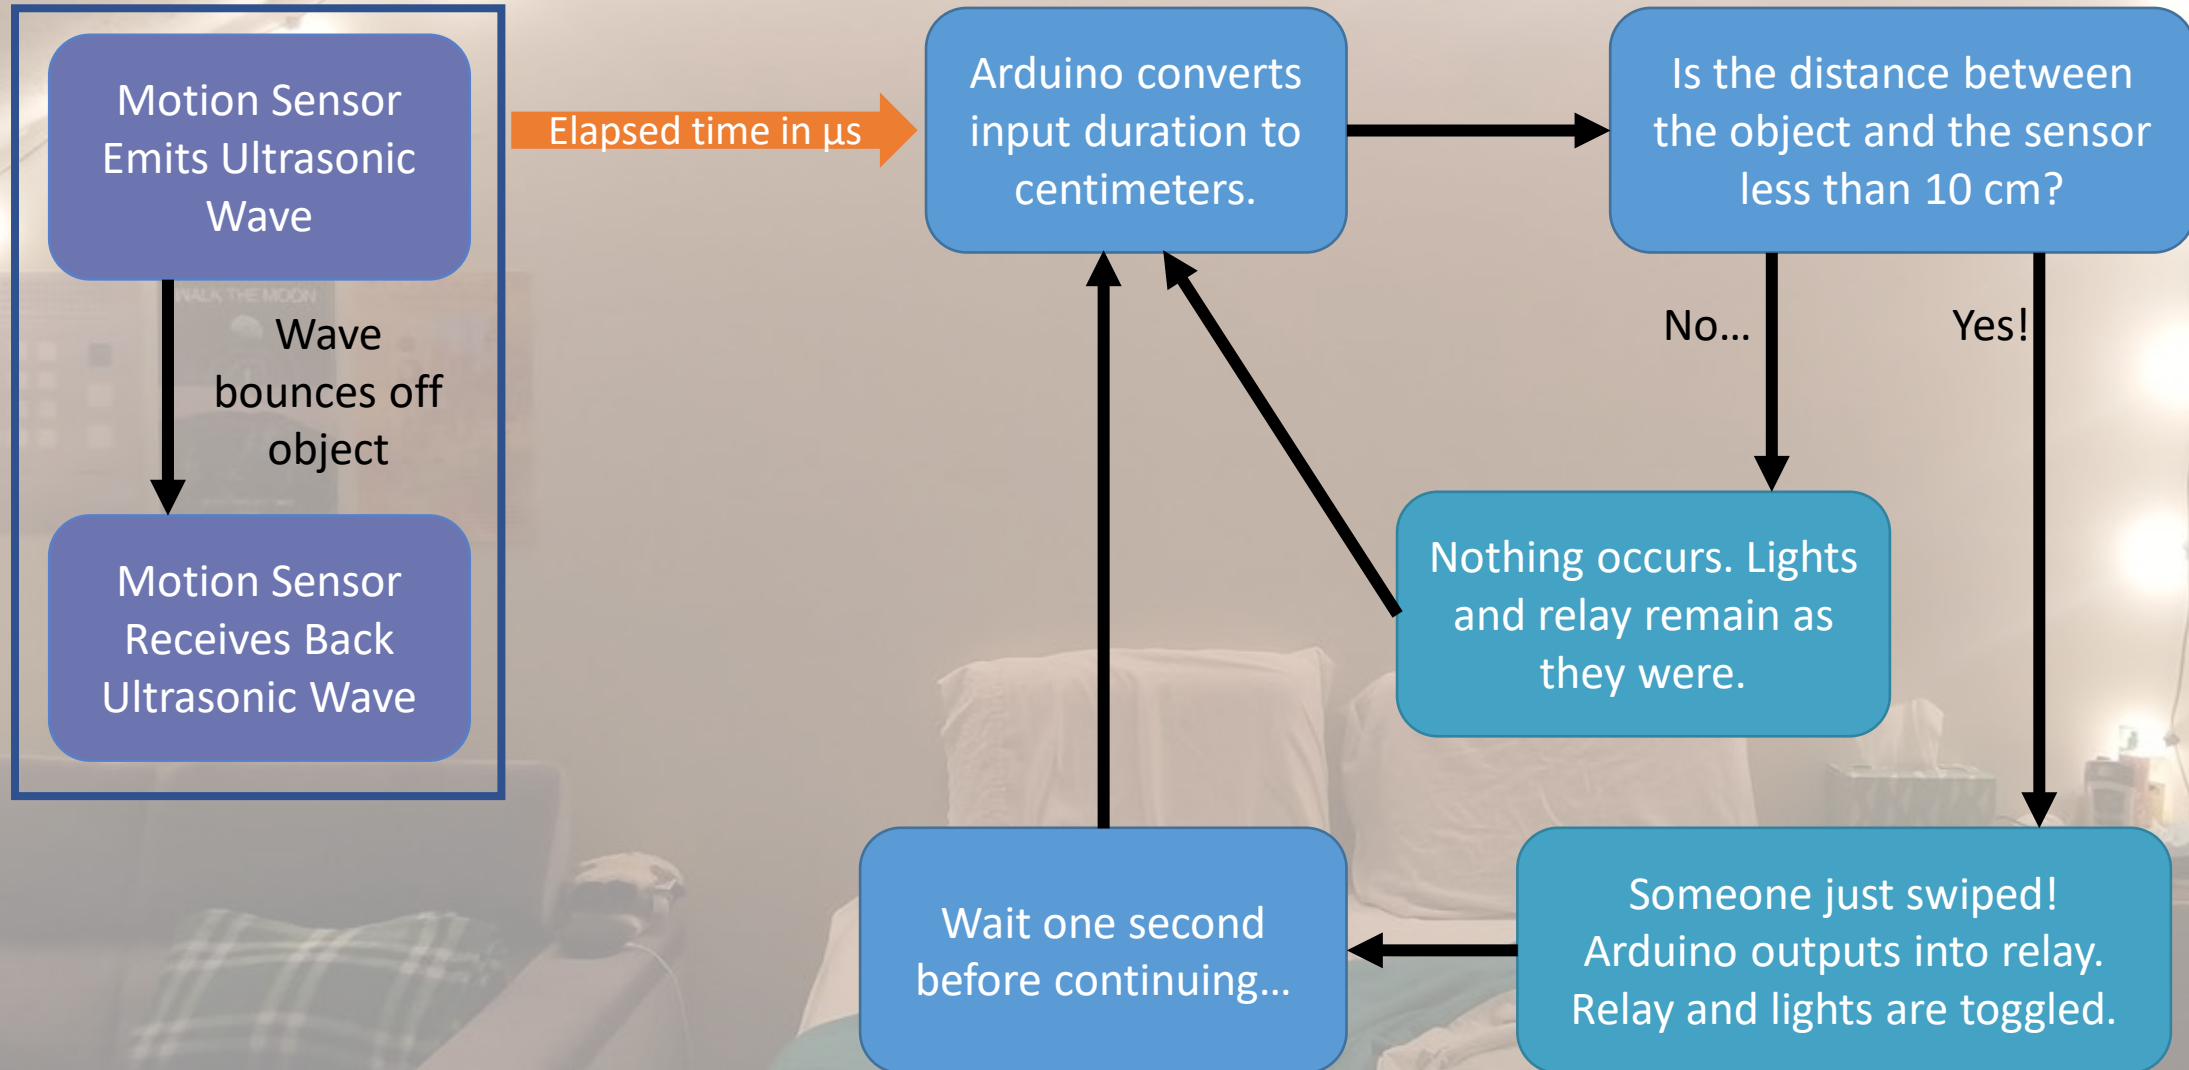

Second Idea: Motion Sensing

- Ultrasonic (motion) sensor sends out and receives back its own ultrasonic waves.
- In contrast, sound sensor uses microphone which takes in sounds including – but not limited to – clapping.

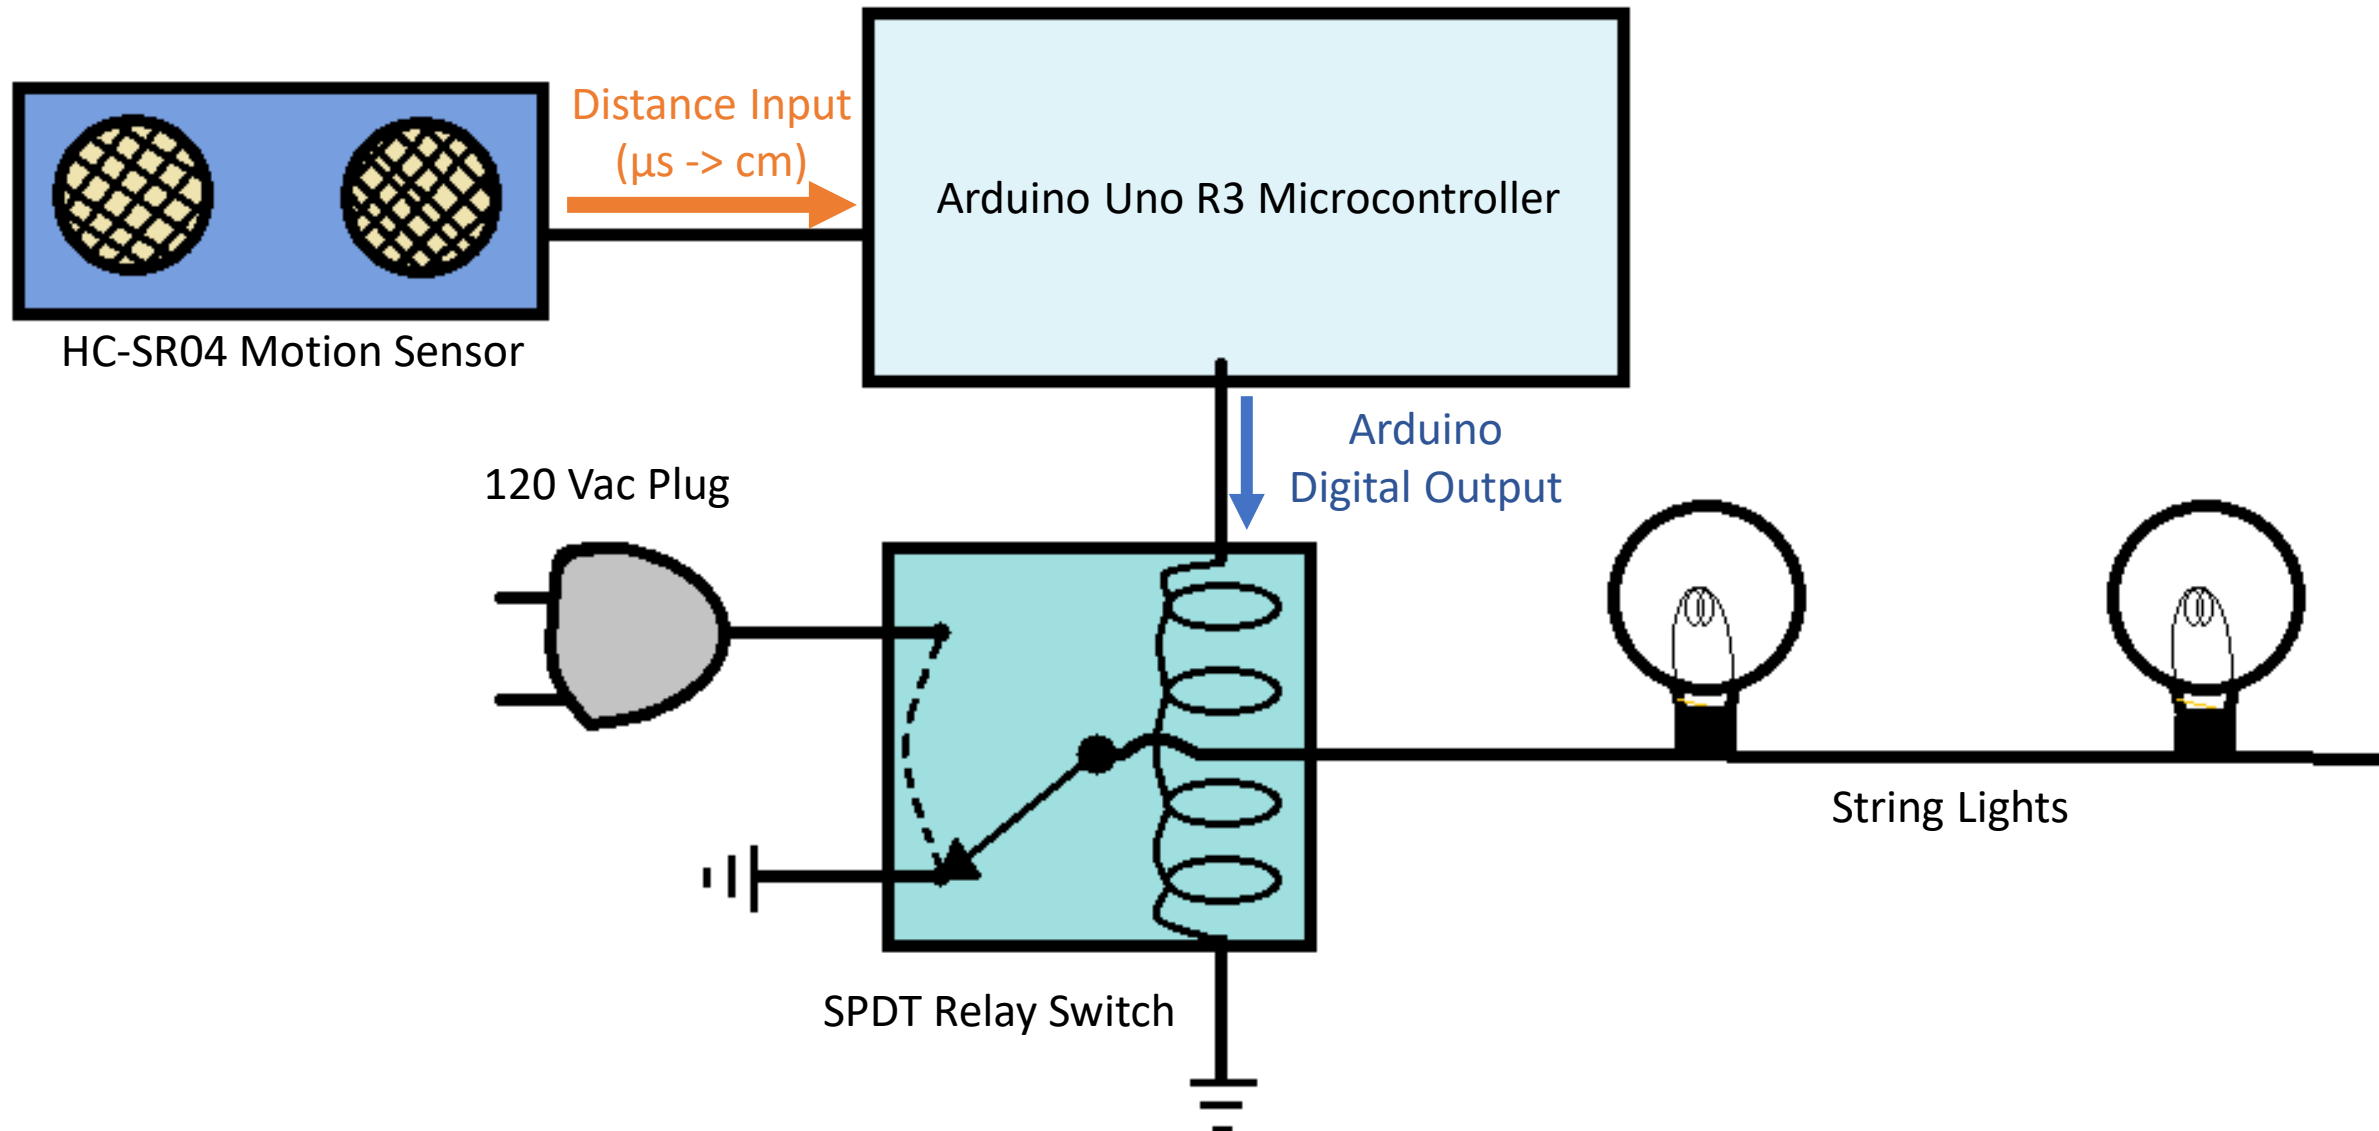

Pros and Cons

- Variety of noises made in daily routine aren't interruptive.
- Doesn't wake the roommates when lights are turned off at night.
- Still have to walk over to sensor to toggle the lights.

KY-038 Sound Sensor Schematic

Debugging

- While a clap does generate a spike in amplitude when looking at 20mV scales, other noise is picked up by the sound sensor.
 - On the oscilloscope, noise is shown to have frequency in MHz, in addition to 20mV, 60Hz hum.
 - Is the noise due to a corrupted Arduino? My laptop? An antenna? Clock speed?
- Implementing a band pass filter to isolate the frequency of a clap could filter out unwanted noise in the Hz and MHz scale.

Debugging

A bedroom scene with warm lighting from string lights. A bed with white pillows and a teal blanket is in the center. To the left is a grey couch with a plaid pillow. On the wall are posters, including one for 'WALK THE MOON'. A nightstand with a tissue box and other items is on the right.

Thank you!
