

A:T and C:G

DNA vs. RNA

DEOXYRIBONUCLEIC ACID

RIBONUCLEIC ACID

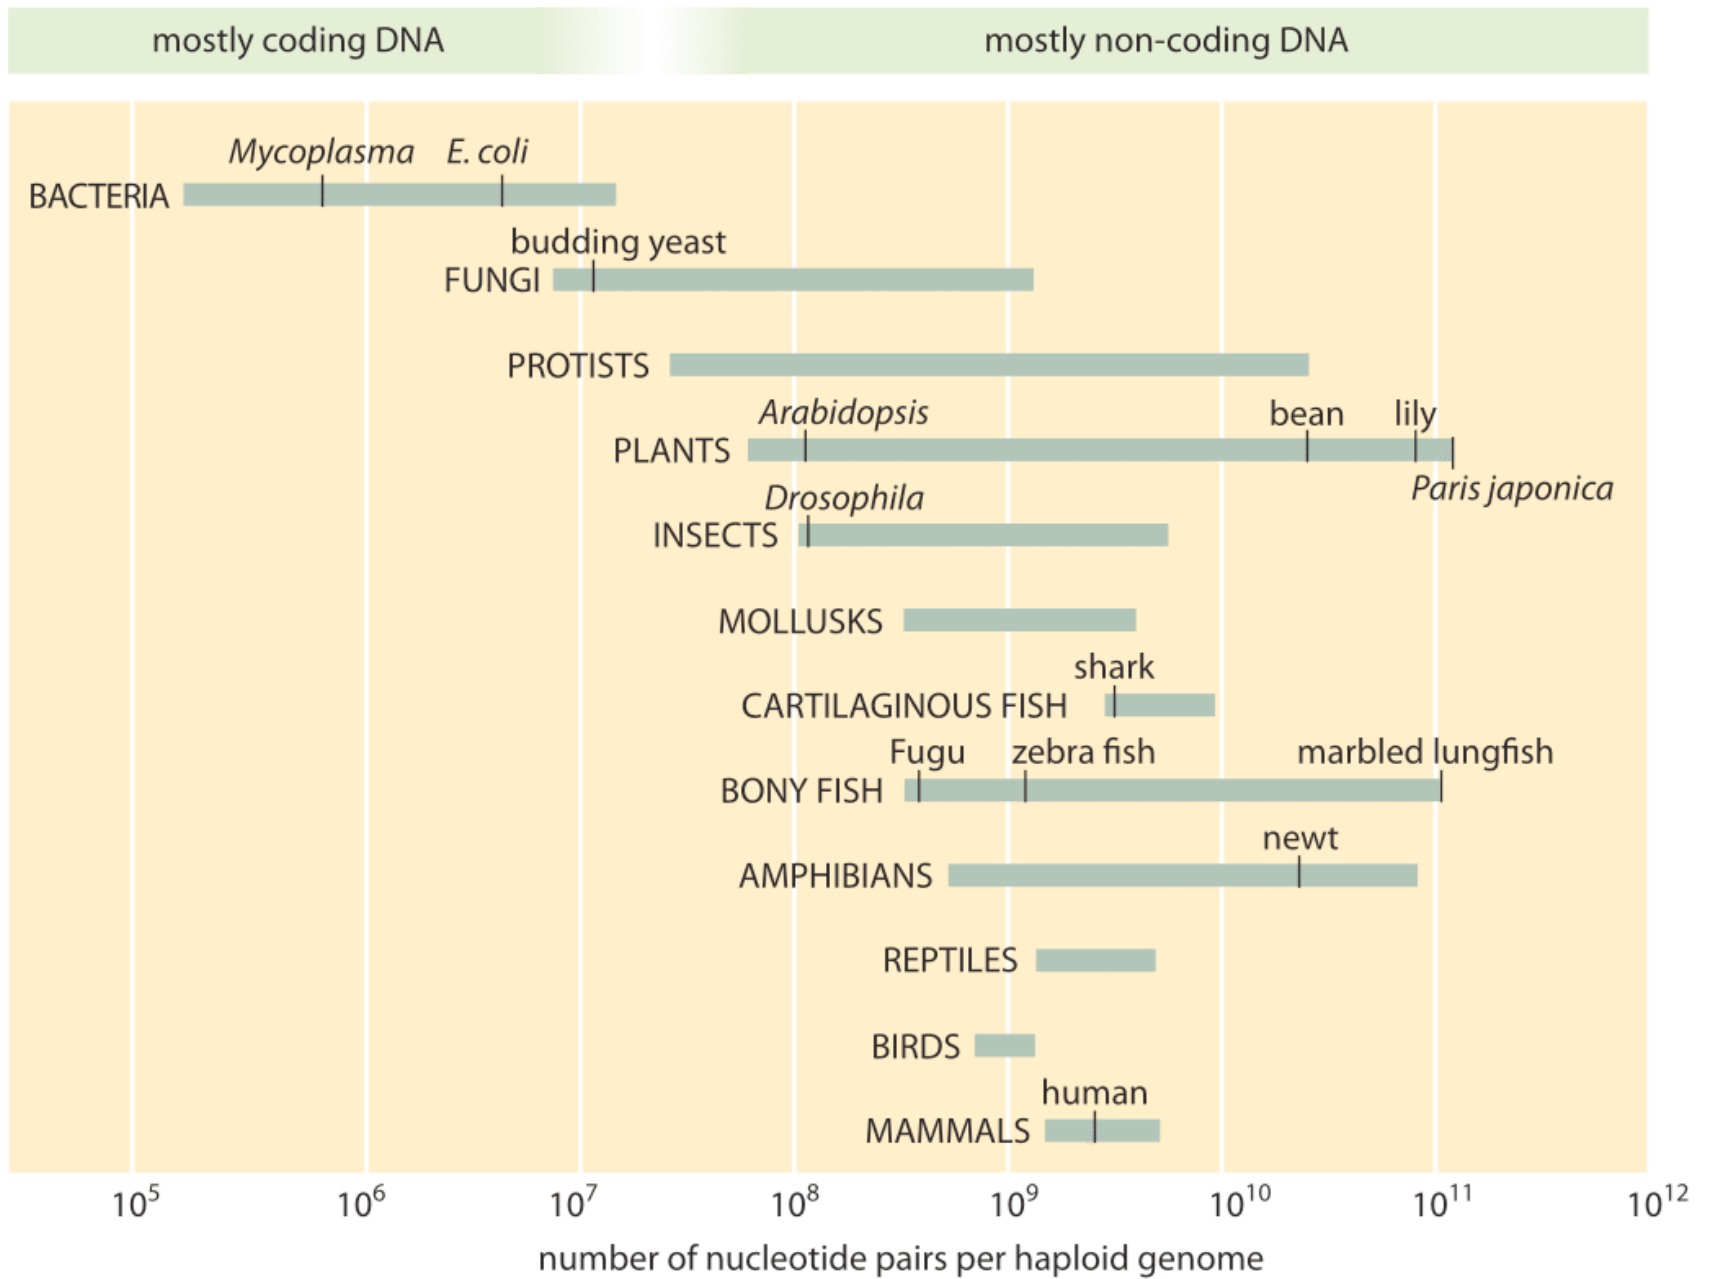

DOUBLE-STRANDED
SUGAR*PHOSPHATE

USUALLY SINGLE-STRANDED
SUGAR*PHOSPHATE

* DEOXYRIBOSE

★ RIBOSE

Crazy Numbers

Replication Speed:

<i>E. coli</i>	1000 bp/sec
Humans	50 bp/sec

Replication Fidelity: 10^{-9} - 10^{-11} /bp

Analogy (Tanya Baker via Rob Phillips)

DNA diameter: 1m

Size of Replication Machinery: FedEx Truck

Moving at speed 500 km/hr, making delivery on both sides of street every 10cm, finish journey in 40 min, mistakenly deliver package once every 3 years!

A GUIDE TO THE TWENTY COMMON AMINO ACIDS

AMINO ACIDS ARE THE BUILDING BLOCKS OF PROTEINS IN LIVING ORGANISMS. THERE ARE OVER 500 AMINO ACIDS FOUND IN NATURE - HOWEVER, THE HUMAN GENETIC CODE ONLY DIRECTLY ENCODES 20. 'ESSENTIAL' AMINO ACIDS MUST BE OBTAINED FROM THE DIET, WHILST NON-ESSENTIAL AMINO ACIDS CAN BE SYNTHESISED IN THE BODY.

Chart Key: ● ALIPHATIC ● AROMATIC ● ACIDIC ● BASIC ● HYDROXYLIC ● SULFUR-CONTAINING ● AMIDIC ○ NON-ESSENTIAL ○ ESSENTIAL

Note: This chart only shows those amino acids for which the human genetic code directly codes for. Selenocysteine is often referred to as the 21st amino acid, but is encoded in a special manner. In some cases, distinguishing between asparagine/aspartic acid and glutamine/glutamic acid is difficult. In these cases, the codes asx (B) and glx (Z) are respectively used.

organism	errors per base or codon	BNID and measurement methods
transcription		
<i>E. coli</i>	10^{-4}	111146, transition mutations based on sequencing at very high (10^6) coverage (2013)
<i>E. coli</i>	10^{-5}	105212, <i>In vitro</i> selection for rifampicin resistance and increased leakiness of an early, strongly polar nonsense mutation of lacZ (1983, 1986)
<i>E. coli</i>	10^{-4}	103453, activity in strains carrying lacZ mutations (1981)
<i>S. cerevisiae</i>	2×10^{-6}	110019, RNA pol II, determined <i>in vitro</i> (2008)
<i>S. cerevisiae</i>	2×10^{-4}	105213, RNA pol III, determined based on selectivity (2007)
<i>C. elegans</i>	4×10^{-6}	111144, determined using bar coded sequencing (2013)
translation		
<i>E. coli</i>	3×10^{-4}	105069, Lys-tRNA, reporter system for frequency of each type of misreading error (2007)
<i>E. coli</i>	$1-4 \times 10^{-3}$	105215, identify cases that do not contain the amino acid cysteine responsible for the missense substitution (1983)
<i>E. coli</i>	$10^{-4}-10^{-3}$	103454, identify cases that do not contain the amino acid cysteine responsible for the missense substitution (1977, 1983)
<i>B. subtilis</i>	4×10^{-3}	105466, GFP with nonsense mutation, also find 2.4% for frame-shift (!) (2010)
<i>S. cerevisiae</i>	$0.5-2 \times 10^{-5}$	105216, measurement of rescue rate of inactivating mutations of type III chloramphenicol acetyl transferase (1998)
