

A Guide to First-Passage Processes

1. First Passage Fundamentals

- 1.1 What is a First-Passage Process?
 - 1.1.1 A Simple Illustration
 - 1.1.2 Fundamental Issues
- 1.2 Connection Between First-Passage and Occupation Probabilities
- 1.3 Probability Distribution of a One-Dimensional Random Walk
 - 1.3.1 Discrete Space and Time
 - 1.3.2 Discrete Space and Continuous Time
 - 1.3.3 Continuous Space and Time
 - Scaling Solution
 - Fourier Transform Solution
 - Laplace Transform Solution
 - Fourier-Laplace Transform Solution
- 1.4 Relation Between Laplace Transforms and Real Time Quantities
- 1.5 Asymptotics of the First-Passage Probability
- 1.6 Connection Between First-Passage and Electrostatics
 - 1.6.1 Background
 - 1.6.2 Green's Function Formalism
 - Hitting Probability
 - Hitting Time
 - 1.6.3 Laplacian Formalism
 - Splitting Probabilities
 - Unconditional and Conditional Mean First-Passage Times
- 1.7 Random Walks and Resistor Networks
 - 1.7.1 Introduction
 - 1.7.2 The Basic Relation
 - 1.7.3 Escape Probabilities, Resistance, and Pólya's Theorem
- 1.8 Epilogue

2. First Passage in a Finite Interval

- 2.1 Introduction
 - 2.1.1 Basic Questions
- 2.2 Time-Dependent Formulation
 - 2.2.1 Survival Probability: Absorption Mode
 - Isotropic Diffusion
 - Biased Diffusion
 - 2.2.2 First-Passage Probability and Mean Exit Times
 - Isotropic Diffusion
 - Absorption Mode
 - Reflection Mode
 - Biased Diffusion
 - Absorption Mode
 - Transmission Mode
- 2.3 Time-Integrated Formulation
 - 2.3.1 Splitting Probabilities and Unconditional Exit Time: Absorption Mode
 - Isotropic Diffusion
 - Biased Diffusion
 - The Freely Accelerated Particle
 - 2.3.2 Conditional Mean Exit Times: Absorption Mode
 - 2.3.3 Transmission Mode
 - 2.3.4 Biased Diffusion as a Singular Perturbation
- 2.4 Discrete Random Walk
 - 2.4.1 A Simple Illustration for a Short Chain
 - Discrete Random Walk
 - Continuous Time Random Walk
 - 2.4.2 First-Passage Probabilities
 - Absorption Mode
 - Transmission Mode

- Direct Solution
 - Recursive Solution
- 2.4.3 Mean First-Passage Time

3. Semi-Infinite System

- 3.1 The Basic Dichotomy
- 3.2 Image Method
 - 3.2.1 The Concentration Profile
 - 3.2.2 First-Passage Properties
 - Isotropic Diffusion
 - Biased Diffusion
 - Long-Range Hopping
 - Semi-Infinite Slab
- 3.3 Systematic Approach
 - 3.3.1 Green's Function Solution
 - 3.3.2 Constant-Density Initial Condition
- 3.4 Discrete Random Walk
 - 3.4.1 The Reflection Principle
 - 3.4.2 Consequences for First Passage
 - 3.4.3 Origin Crossing Statistics
 - Qualitative Picture and Basic Questions
 - Number of Returns to the Origin
 - Lead Probability and the Arcsine Law
- 3.5 Imperfect Absorption
 - 3.5.1 Motivation
 - 3.5.2 Radiation Boundary Condition
 - 3.5.3 Connection to a Composite Medium
 - Diffusion-Absorption Equation
 - Single Particle Initial Condition
 - Uniform Initial Condition
 - 3.5.4 Equivalence to the Radiation Boundary Condition
- 3.6 The Quasi-Static Approximation
 - 3.6.1 Motivation
 - 3.6.2 Quasi-Static Solution at an Absorbing Boundary
 - 3.6.3 Quasi-Static Solution at a Radiation Boundary

4. Illustrations of First Passage in Simple Geometries

- 4.1 First Passage in Real Systems
- 4.2 Neuron Dynamics
 - 4.2.1 Some Basic Facts
 - 4.2.2 Integrate and Fire Model
- 4.3 Self-Organized Criticality
 - 4.3.1 Isotropic and Directed Sandpile Models
 - 4.3.2 Bak-Sneppen Model
 - 4.3.3 Related Systems
 - One-Dimensional Traffic Jams
 - Anisotropic Interface Depinning
- 4.4 Kinetics of Spin Systems
 - 4.4.1 Background
 - 4.4.2 Solution to the One-Dimensional Ising-Glauber Model
 - 4.4.3 Solution to the Voter Model in all Dimensions
- 4.5 First Passage in Composite and Fluctuating Systems
 - 4.5.1 Motivation
 - 4.5.2 Segments with Different Diffusivities
 - 4.5.3 Segments with Different Bias Velocities
 - Two Segments
 - Three Segments
 - 4.5.4 Resonant First Passage in a Fluctuating Medium
- 4.6 Interval with Spatially Variable Diffusion
 - 4.6.1 Basic Examples

- 4.6.2 Diffusivity $1 - (x/N)^2$
- 4.6.3 Diffusivity $1 - |x|/N$
- 4.6.4 Diffusivity $(1 - |x|/N)^\mu$
- 4.7 The Growing “Cage”
 - 4.7.1 General Considerations
 - 4.7.2 Slowly Growing Cage: Adiabatic Approximation
 - 4.7.3 Rapidly Growing Cage: “Free” Approximation
 - 4.7.4 Marginally Growing Cage
 - Heuristics
 - Asymptotics
 - 4.7.5 Iterated Logarithm Law for Ultimate Survival
- 4.8 The Moving “Cliff”
 - 4.8.1 Rapidly Moving Cliff
 - 4.8.2 Marginally Moving Cliff
 - 4.8.3 Diffusing Cliff

5. Branched and Hierarchical Media

- 5.1 Beyond One Dimension
- 5.2 Cayley Tree
- 5.3 Hierarchical 3-Tree
 - 5.3.1 Transmission in the First-Order Tree
 - 5.3.2 Exact Renormalization in the Nth-Order Tree
 - 5.3.3 Reflection in the 3-Tree
 - 5.3.4 Conclusions
- 5.4 Comb Structures
 - 5.4.1 Introduction
 - 5.4.2 Homogeneous Comb
 - One Sidebranch
 - Periodic Sidebranching
 - Infinite-Length Sidebranches
 - 5.4.3 Hierarchical Comb
 - First-Passage Time
 - First-Passage Probability
- 5.5 Hydrodynamic Transport
 - 5.5.1 Single Sidebranch System
 - Solution to the Diffusion Equation
 - Infinite Length Sidebranch
 - The Role of Bias
 - 5.5.2 Single Junction Network
 - 5.5.3 The Hierarchical Blob
 - First-Passage Time
 - First-Passage Probability

6. Systems with Spherical Symmetry

- 6.1 Introduction
- 6.2 First Passage between Concentric Spheres
 - 6.2.1 Splitting Probabilities
 - 6.2.2 First Passage to a Sphere in Radial Potential Flow
 - 6.2.3 Connection between Diffusion in General Dimension and Radial Drift in Two Dimensions
- 6.3 First Passage to a Sphere
 - 6.3.1 Image Solution
 - 6.3.2 Efficient Simulation of Diffusion-Limited Aggregation
- 6.4 Time-Dependent First-Passage Properties
 - 6.4.1 Overview
 - 6.4.2 Both Boundaries Absorbing
 - 6.4.3 One Reflecting and One Absorbing Boundary
 - Isotropic diffusion in arbitrary spatial dimension
 - Radially Biased Diffusion in Two Dimensions
- 6.5 Reaction Rate Theory
 - 6.5.1 Background

- 6.5.2 Time-Dependent Solution for General d
 - The Case $\nu < 0$ or $d > 2$
 - The Case $\nu \geq 0$ or $d \leq 2$
- 6.5.3 Elementary Time-Dependent Solution for and $d = 3$
- 6.5.4 Quasi-Static Approach
 - Dimensions $d < 2$
 - Two Dimensions
 - Dimensions $d > 2$
- 6.5.5 Closest Particle to an Absorbing Sphere

7. Wedge Domains

- 7.1 Why Study the Wedge?
- 7.2 Two-Dimensional Wedge
 - 7.2.1 Solution to the Diffusion Equation
 - 7.2.2 Physical Implications
- 7.3 Three-Dimensional Cone
- 7.4 Conformal Transformations and Electrostatic Methods
 - 7.4.1 Point Source and Line Sink
 - 7.4.2 General Wedge Angles
- 7.5 First-Passage Times
 - 7.5.1 Infinite Two-Dimensional Wedge
 - 7.5.2 Pie Wedge in Two Dimensions
 - 7.5.3 Infinite Three-Dimensional Cone
 - 7.5.4 Conditional Exit Time for the Infinite Wedge
- 7.6 Extension to Time-Dependent First-Passage Properties

8. Applications to Simple Reactions

- 8.1 Reactions as First-Passage Processes
- 8.2 Kinetics of the Trapping Reaction
 - 8.2.1 Exact Solution in One Dimension
 - Long-Time Behavior
 - Short-Time Behavior
 - 8.2.2 Lifshitz Argument for General Spatial Dimension
 - Isotropic Diffusion
 - Biased Diffusion
- 8.3 Reunions and Reactions of Three Diffusing Particles
 - 8.3.1 Prey Survival Probability
 - “Surrounded” Prey
 - “Chased” Prey
 - 8.3.2 Pair Meeting Probabilities
 - 8.3.3 Lead and Order Probabilities
 - 8.3.4 Extension to Arbitrary Number of Particles
- 8.4 Diffusion-Controlled Reactions
 - 8.4.1 Basic Properties
 - 8.4.2 The Capture Reaction
 - 8.4.3 Coalescence
 - 8.4.4 Annihilation
 - 8.4.5 Aggregation
 - Introduction
 - Solution for the Cluster Concentrations
- 8.5 Ballistic Annihilation
 - 8.5.1 Two-Velocity Model
 - 8.5.2 Three-Velocity Model
 - Basic Phenomenology
 - “Slow” Impurity Limit
 - “Fast” Impurity Limit
